# ASNT5076-KHC DC-28Gbps/16GHz Signal Phase Shifter with Amplitude Control

- Broadband (DC-28Gbps/DC-16GHz) tunable data/clock phase shifter
- Delay adjustment range of 155ps
- Exhibits low jitter and limited temperature variation over industrial temperature range
- 1GHz of bandwidth for the phase adjustment tuning ports
- Ideal for high speed proof-of-concept prototyping
- Fully differential CML input interfaces
- Fully differential CML output interface with adjustable SE amplitude from 0 to 1.0V
- 10MHz of bandwidth for the amplitude adjustment tuning ports
- Single +3.3V or -3.3V power supply
- Power consumption: 1.36*W*
- Fabricated in SiGe for high performance, yield, and reliability
- Custom CQFN 24-pin package

Offices: 310-530-9400 / Fax: 310-530-9402 www.adsantec.com

### **DESCRIPTION**

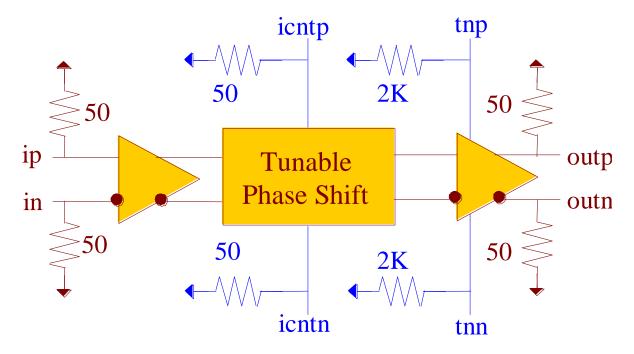

Fig. 1. Functional Block Diagram

ASNT5076-KMC is a data / clock variable delay line fabricated in SiGe technology. The IC shown in Fig. 1 provides an adjustable delay of its differential output signal outp/outn in relation to its broadband input signal ip/in. The delay adjustment range is temperature-stabilized. The delay is controlled through a wide-band differential tuning port icntp/icntn.

The part's I/O's support the CML logic interface with on chip 50*Ohm* termination to vcc and may be used differentially, AC/DC coupled, single-ended, or in any combination (see also POWER SUPPLY CONFIGURATION). In the DC-coupling mode, the input signal's common mode voltage should comply with the specifications shown in ELECTRICAL CHARACTERISTICS. In the AC-coupling mode, the input termination provides the required common mode voltage automatically. The differential DC signaling mode is recommended for optimal performance.

The output amplitude is controlled through a wide-band differential tuning port tnp/tnn. Due to an extremely low jitter, the part is suitable for use in high-speed measurement / test equipment.

## **Delay Control Port**

The delay is controlled through a wide-band differential tuning port icntp/icntn. The delay control diagram is shown in Fig. 2.

Offices: 310-530-9400 / Fax: 310-530-9402 www.adsantec.com

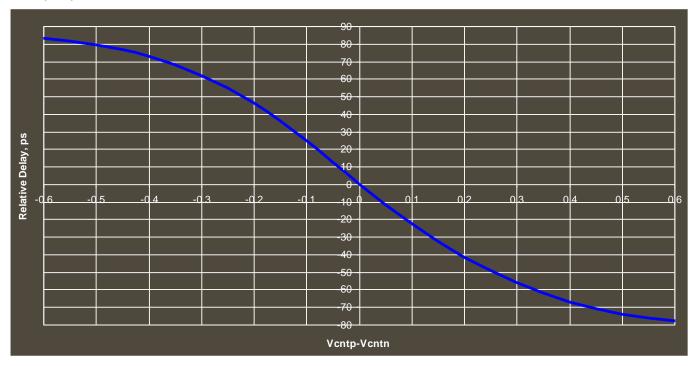

Fig. 2. Delay Control Diagram

# **Amplitude Control Port**

The output amplitude is controlled through a wide-band differential tuning port tnp/tnn. The amplitude control diagram is shown in Fig. 3.

#### POWER SUPPLY CONFIGURATION

The part can operate with either a negative supply (vcc = 0.0V = ground and vee = -3.3V), or a positive supply (vcc = +3.3V and vee = 0.0V = ground). In case of a positive supply, all I/Os need AC termination when connected to any devices with 50Ohm termination to ground. Different PCB layouts will be needed for each different power supply combination.

#### All the characteristics detailed below assume vcc = 0.0V and vee = -3.3V.

#### ABSOLUTE MAXIMUM RATINGS

Caution: Exceeding the absolute maximum ratings may cause damage to this product and/or lead to reduced reliability. Functional performance is specified over the recommended operating conditions for power supply and temperature only. AC and DC device characteristics at or beyond the absolute maximum ratings are not assumed or implied. All min and max voltage limits are referenced to ground.

#### TERMINAL FUNCTIONS

TERMINAL			DESCRIPTION						
Name	No.	Type							
	High-Speed I/Os								
ip	21	CML	Differential high-speed signal inputs with internal SE 50 <i>Ohm</i>						
in	23	input	termination to VCC						
icntp	3	CML	Differential high-speed control inputs with internal SE 50 <i>Ohm</i>						
icntn	5	input	termination to VCC						
tnp	17	Input	Differential low-speed control inputs with internal SE 2K <i>Ohm</i>						
tnn	15		terminations to VCC						
outp	11	CML	Differential high-speed signal outputs with internal SE 50 <i>Ohm</i>						
outn	9	output	termination to vcc. Require external SE 50 <i>Ohm</i> termination to vcc						
	Supply and Termination Voltages								
Name		Des	scription	Pin Number					
vcc	Positive power supply (+3.3 <i>V</i> or 0)			2, 4, 6, 8, 10, 12, 14, 16, 18, 20, 22, 24					
vee	Negative power supply $(0V \text{ or } -3.3V)$			1, 7, 13, 19

#### PACKAGE INFORMATION

The chip die is housed in a custom 24-pin CQFN package shown in This device complies with Commission Delegated Directive (EU) 2015/863 of 4 June 2015 amending Annex II to Directive 2011/65/EU of the European Parliament and of the Council as regards the list of restricted substances (Text with EEA relevance) on the restriction of the use of certain hazardous substances in electrical and electronics equipment (RoHS Directive) in accordance with the definitions set forth in the directives for all ten substances.

4. The package provides a center heat slug located on its back side to be used for heat dissipation. ADSANTEC recommends for this section to be soldered to the **vcc** plain, which is ground for a negative supply, or power for a positive supply.

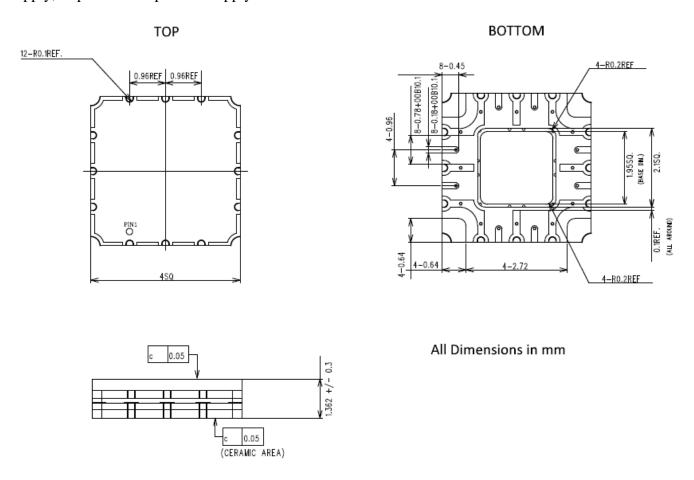

Fig. 4. CQFN 24-Pin Package Drawing (All Dimensions in mm)

The part's identification label is ASNT5076-KHC. The first 8 characters of the name before the dash identify the bare die including general circuit family, fabrication technology, specific circuit type, and part version while the 3 characters after the dash represent the package's manufacturer, type, and pin out count.

This device complies with Commission Delegated Directive (EU) 2015/863 of 4 June 2015 amending Annex II to Directive 2011/65/EU of the European Parliament and of the Council as regards the list of restricted substances (Text with EEA relevance) on the restriction of the use of certain hazardous
